Inserting SIM Card and Battery

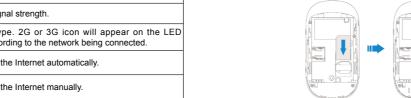

Indication

- 1. Slide the back cover and remove it

Icon

2. Insert the SIM card into the SIM card holder.

Insert the battery as shown with the contacts located against the metal springs, and press the battery down into the case.

4. Slide the back cover and lock the cover in its place

Inserting microSD Card

Pull the microSD cover out of the card slot.

Do not pull the cover rudely, as it is connected with the device.

2. Insert the microSD card into the microSD slot. The following picture shows the correct inserting direction. You will hear a click when the microSD card locks in place.

3. Close the microSD cover.

Switching On/Off Your Device

Hold the **Power** button to switch on/off the device.

The device is powered on when the LED screen lights up.

Charging Your Device

You can charge your device by using USB cable or adapter.

- Insert the charger lead carefully.
- 2. The plug only fits one way. Do not use excessive force to insert the plug.

Working Mode

Your device supports three working modes. For the client, we only use PC or laptop as the example in this document.

USB Mode: Connect to the device with the USB cable.

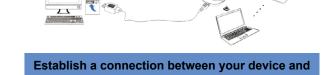

Wi-Fi Mode: Connect to the device via Wi-Fi.

Mixed Mode: Connect to the device with the above two connection methods.

If you want to connect to the Internet by using Wi-Fi mode, make sure that

The following picture is the application example. All of the client devices car surf on the Internet at the same time.

the client

Via USB Cable

- 1. Connect your device and the client with the USB cable.
- Power on your device.
- 3. Follow the system prompts to complete the software installation

- installation program in path of My Computer > Mobile Hotspot
- The driver of your device will be installed at the same time
- 4. After the installation, the system will create a shortcut icon on your
- desktop and a Mobile Hotspot program group in the Start→Programs menu. The connection between your device and the client will be established successfully a moment later.

1. Power on your device directly. It will take 1~2 minutes to initialize.

Use your normal Wi-Fi application on the client to search the available wireless network.

You need to check your Wireless Network Connection. Set the client

to obtain an IP address automatically in the Internet protocol (TCP/IP) properties, and the client will get an IP address like "192.168.0.100".

3. Select the SSID of your device, and then click **Connect.** The following figure is only for your reference.

There will be a pop-up window to require the password. Check the label on your device to gain the SSID and preset password information. Please do remember the new password when you change the password by selecting Settings > Wi-Fi Settings > Security after logging in the WebGU Configuration Page. You can restore the device to the factory default settings

4. Wait a moment, the connection between your device and the client will be established successfully

Access the Internet

- Switch on the device
- Establish a connection between your device and the client.
- Configuration page. 3. After successfully establishing the connection, access the Internet in the Always On and Manual mode. The default mode is Always On.

You can browse the WebGUI Configuration page and click WAN Connection to set the WAN connection mode

Access the WebGUI Configuration Page
